Information Skills

More than 48 billion of URL of URLs in Google's index

More than 4,5 milion of articles (in English) on Wikipedia

Irregular quality of contents

Information is disperse in diverse sources

We tend to search information without having a deep knowledge of the sources

We tend not to evaluate the results obtained in our search

ENGINY20

Which sources?

BRGF

What is a catalogue?

It is a database useful to know

- **the documents held by a library or group of libraries** (books, journals, DVD, etc.)
- where these materials are **located**
- which is their **availability** to consult or loan them

Usually we **don't find** in a catalogue:

- Journal articles, book chapters, conference papers

Method for node ranking in a linked database

Abstract

A method assigns importance ranks to nodes in a linked database, such as any database of documents containing citations, the world wide web or any other hypermedia database. The rank assigned to a document is calculated from the ranks of documents citing it. In addition, the rank of a document is calculated from a constant representing the probability that a browser through the database will randomly jump to the document. The method is particularly useful in enhancing the performance of search engine results for hypermedia databases, such as the world wide web, whose documents have a large variation in quality.

Inventors: Page; Lawrence (Stanford, CA)
Assignee: The Board of Trustees of the Leland Stanford Junior University (Stanford, CA)

ENGINY20

Search Strategy

BRGF

Search Strategy

1a. Define your search topic in a sentence

“Applying artificial intelligence to computer games”

Search Strategy

2a. Select information sources

- Library catalogs: *UPC, CCUC...*
- Bibliographic databases: Inspec, WoS, etc
- Internet: *Scholar Google, etc.*

Search Strategy

3a. Identify major concepts and its Boolean relationship

Search Strategy

4a. Identify keywords and synonyms

<i>Game console</i> <i>Game consoles</i>	<i>Videogame</i> <i>Videogames</i>	<i>Computer game</i> <i>Computer games</i>	<i>Artificial intelligence</i> <i>AI</i>
---	---	---	---

Search Strategy

5a. Study the query language of the resources

- Operators, Search fields, Thesauri , etc

Search Strategy

6a. Write a search statement according to it

((computer* AND game*) OR videogame* OR console*) AND (“artificial intelligence” OR ai)

Search Strategy

- **Step 2: Execute the search**
- **Step 3: Evaluate your results**
- **Step 4: Check the terminology and restart if needed**

ENGINY20

Evaluation of information

BRGF

Search Strategy

Evaluate your search results

- Too many articles? (Noise)

- Use more specific terms or phrases to narrow the search to exactly what you need
- Limit your search to restrict retrieval to entries that meet specific requirements

-Too few articles? (Silence)

- Check the spelling
- Use some more general search terms or
- Add more synonyms (with OR). Use the thesaurus if possible or look in other interesting records and search using their subjects.

Evaluation of information

- URL domain: **.com, .edu, .info, etc.?**
- Website creation data (**© copyright**), an latest update?
- Who???: **personal website?? Institutional website?**
- Information about author? (**CV, activities, other publications**)

Evaluation of information

- **Authorship intention (“about us”)?: inform, criticize, sell...?**
- **The data offered are easily verifiable?**
- **Data offered are from an acknowledged source?**
- **Are there some links to interesting or related websites?**
- **The website is cited or linked from other websites?**

ENGINY20

Ethical use of information.

BRGF

Ethical use of information. Plagiarism

- Plagiarism is defined as "a piece of writing that has been copied from someone else and is presented as being your own work" or "taking someone's words or ideas as if they were your own"
- Plagiarism is a serious issue in the academic community.
- Plagiarism occurs when you use someone else's ideas and PRETEND they are your own.
- You CAN use other peoples' ideas and even their words. **BUT YOU HAVE TO ACKNOWLEDGE THE AUTHOR!**

Ethical use of information. Why to cite?

- Citations reflect the **careful and thorough work** you have put into locating and exploring your sources.
- Citations **help readers understand the context of your argument** and are a courtesy to the reader, who may share your interest in a particular area of study.
- Citations allow you to **acknowledge** those authors who contributed to your learning and your work.
- Citations, by illustrating your own learning process, also **draw attention to the originality and legitimacy of your own ideas**.
- By citing sources you demonstrate **your integrity and skill** as a responsible student and participant in your field of study.

Ethical use of information. When to cite?

- **Direct quotes** of more than one word. If the author's words are powerful or you need to be specific for your argument, the authors' words can be used as a direct quote.
- **Paraphrasing or summarizing.** If you want to use someone else's idea to help you make your point or to support your own ideas, in this case you would "translate" the ideas into your own words.
- Information which may be **common knowledge but still unfamiliar to your reader.** This would also include statistical information which may be familiar information but still requires confirmation.
- **Not just books or articles should be cited.** Any source that you use for information can and should be cited including interviews, websites, TV programs, diagrams, etc.
- **Whenever you are not sure** if something should be cited, err on the side of caution and **cite** sources.

Ethical use of information. How to cite?

1) How you will reference your sources within your paper?

Generally you will use one of the following options:

- IN TEXT citation. Your source author is included within the body of your paper. This acts as a reference to your 'Works Cited' page.
- END NOTES. The cited idea or quote is noted with a number and the source is listed at the end of the paper.
- FOOT NOTES format is similar to end notes. However, the citations are listed at the bottom of each page.

Ethical use of information. How to cite?

2) Which format and style guide to use?

There are very specific rules about how to do this. Usually, it depends on the subject area, the journal you want to publish in or the personal preferences of a professor in case of academic works.

The choices will typically be one of the following:

- ISO 690
- CHICAGO (Computer science)
- AIP (Physics)
- MLA (Linguistics)
- APA (Psychology and other social sciences)
